LOURIE G. GASCHKE
Assistant Agricultural Commissioner
Assistant Air Pollution Control Officer

Mr. Richard E. Rominger, Director
California Department of Food and Agriculture
and
The Honorable Board of Supervisors
of Sutter County

The Sutter County Agricultural Crop Report for the 1977 calendar year is submitted to you in accordance with the provisions of Section 2279 of the California Agricultural Code.

The total GROSS value of all crops, livestock and livestock products was \$200,877,000 which is an all time high for Sutter County. It is also the first time in the history of Sutter County Crop Reports that the 200 million dollar figure has been reached.

While the affects of the drought is not readily seen in this report it showed up in each growers expense account.

Over 500 new wells were dug in the county at tremendous expense in order to insure an abundant supply of water to crops.

The drought very definitely caused problems with cereal grains and a close look at the Crop Report shows that acreage devoted to cereal crops dropped from 192,794 acres in 1976 to 146,691 acres in 1977, a drop of 46,103 acres. There was also a substantial drop in gross income from \$64,276,600 in 1976 to \$50,155,500 in 1977, a drop of over \$14,000,000.

Considerable acreage of rice was not planted because the farmers were not assured that they would have enough water to grow the crop. A substantial acreage of farmland that is normally double cropped was left idle after the first crop was harvested due to the lack of water.

The major reasons for the increased gross values in the 1977 Crop Report can be seen by looking at the Fruit and Nut Crops where there was an increase in gross value of \$10,647,700 over the 1976 gross income. This was done with approximately the same acreage. Yield increases and better prices are both attributed to the better income. The next area to look at is the Canning Tomatoes. There is an increase of 9,260 acres which show an increase in yield per acre and an increase in the price per ton received. This all adds up to a \$21,146,000 increase in gross value received by farmers over the 1976 year.

A combination of circumstances caused by the drought actually caused this situation in the Canning Tomato increase. One instance is that many Yolo County tomato farmers leased land for growing tomatoes in Sutter County because they could not get enough water in Yolo County to grow the tonnage they had contracts for. Tomatoes take less water to grow, therefore, they replaced rice with tomatoes and reduced water needs. Many acres of rice land with a potential of \$600. gross per acre were farmed to tomatoes where the average gross is over \$1,300 per acre.

The farmer is not necessarily making more money just because the values received for their crops has gone up or they have produced more and are grossing more.

The Agricultural Extension Service has been unable to keep all data current because of the rapidly rising costs of farming in relation to all costs such as land, equipment, fertilizers, pesticides, etc., but they do know that in many of our crops the profit margin is extremely slim. I have enclosed two pages from the USDA Agricultural Handbook No. 524 that points out very vividly the problems faced by farmers all over the Nation. A close look at the information reveals that production expenses are taking a greater percentage of the gross income and that inflation is taking a heavier toll on the farming community.

A few examples of production costs provided by the Agricultural Extension Office in Sutter County:

<u>Crop</u>	<u>Cost Per Ton To Produce</u>	<u>Average Price Per Ton Received By Sutter County Farmers</u>
Canning Tomato	51.41	56.10
Prunes	491.67	500.00
Rice	156.60	190.78

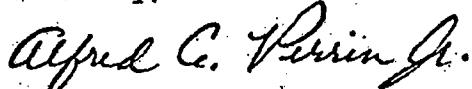

These are average figures and do not reflect poor production or individual problems that might arise in any farming operation.

The main concern of the Department of Agriculture is that there be a better public understanding of the complexities of farming and that the gross figures reported by this report are only part of the total picture.

The 200 million gross income is good for Sutter County because it is reflected many times over in the community.

We wish to express our sincere appreciation and thanks to all those who provided information for this report.

Sincerely,

Alfred C. Perrin, Jr.
Agricultural Commissioner

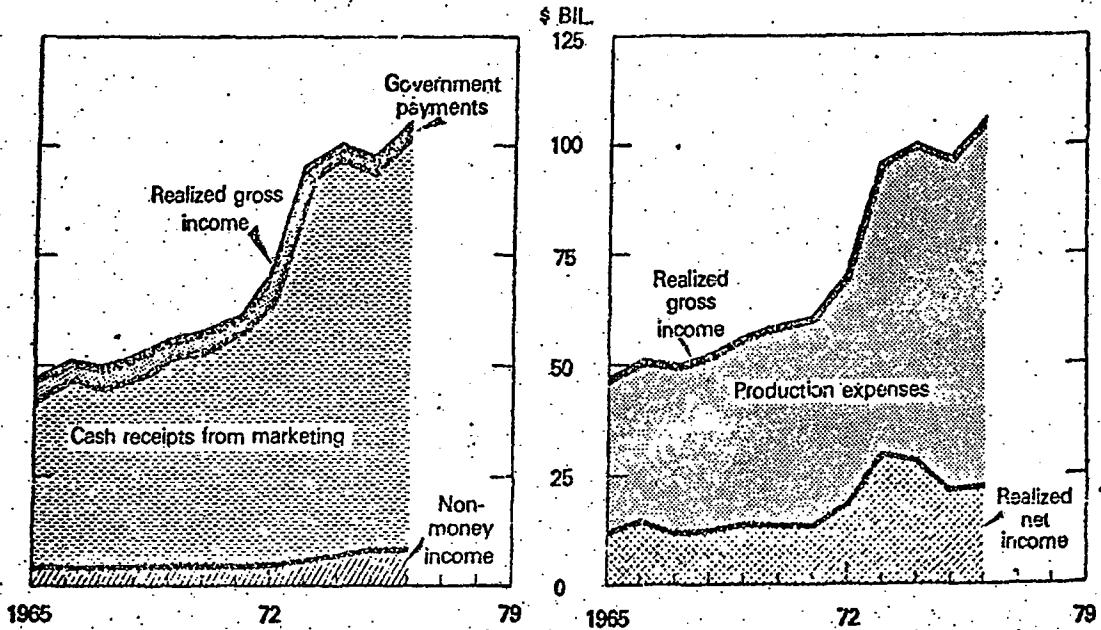

INCOME

Following years of fairly steady growth, cash receipts jumped during the early 1970's, as the result of reduced crop supplies worldwide. With a rebuilding of grain supplies in the mid-1970's, crop prices are again seeking a floor, triggering economic and political pressures to return Government payments as a significant component of gross farm income. Too, during the

recent decade, an imputed rental value for farm dwellings has dominated the "realized non-money and other income" category.

Although the income components yield a generally upward but erratic realized gross income, a steadier and more persistent growth in the producer's expenses etches a much more volatile realized net farm income.

INCOME

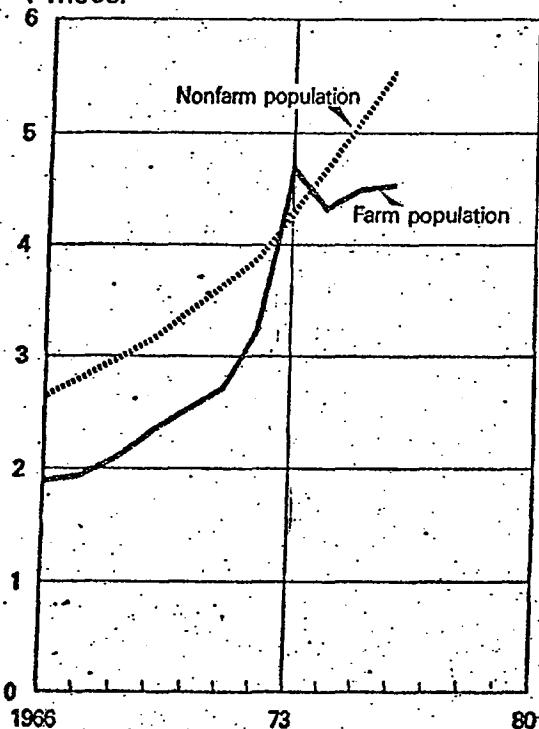

Per capita income of the farm population fluctuates more than that of the nonfarm. However, during most years a substantial proportion of the farm population receives significant amounts of income from nonfarm sources. In recent years, it is estimated that farm operators with sales of less than \$20,000 (around 70 percent of all farms), average more than half their

disposable income from off-farm sources.

Realized net farm income plus or minus the value of the physical change in inventories yields total net farm income. Because of general inflation in the prices paid by farmers for family living items, the purchasing power of this total net income has plummeted from its peak in 1973 to its lowest level of the decade.
