

Frequently Asked Questions

Q: Are COVID-19 Vaccines Safe?

Yes! COVID-19 vaccine have gone through many clinical trials and have been reviewed for safety. Advances in technology and resources to fund the development have made it possible to develop in less than a year.

Q: Should my child get the COVID-19 Vaccine?

American Academy of Pediatrics also recommend the COVID-19 Vaccine for all children and adolescents 12 years of age and older. Speak with your pediatrician if your child is at risk of having severe reactions to the vaccine.

Q: Are there side effects of the Vaccine?

Most individuals who receive the vaccine experience short-lived symptoms that will disappear within a few days. Serious side effects are rare and benefits far outweigh the risk. Those who do experience rare side effects like heart inflammation recover quickly.

Q: What are the benefits of getting my child vaccinated?

They obtain an "army" of anti-bodies that will protect them from getting severely ill as a result of COVID-19. With your child vaccinated, you can feel reassured that your child will be safe while attending school.

FUN FACT

The FDA approved the Pfizer Vaccine to ages 16 and older on August 23, 2021!
