

Therapeutic Algorithm for Covid-19 Patient with Mild-Moderate Symptoms

Mild-moderate symptoms = does **not** require hospitalization or supplemental oxygen

****Medical Conditions at High-Risk for Progression to Severe Disease if COVID-19 Positive**

- Cancer
- Chronic Kidney Disease
- Chronic Liver Disease
- Cystic Fibrosis
- Diabetes (Type 1 or 2)
- Heart Conditions
- Immunocompromised State (Weakened Immune System)
- Overweight And Obesity
- Chronic Lung Disease
- Dementia or other Neurological Conditions
- Disabilities
- HIV Infection
- Mental Health Conditions
- Pregnancy
- Physical inactivity
- Tuberculosis
- Substance use Disorders
- Stroke or Cerebrovascular Disease
- Solid or Blood Stem Cell Transplant
- Smoking, Current or Former
- Sickle Cell Disease or Thalassemia

Also, anyone age 50 years and older, regardless of vaccination status, should be considered.

Therapeutic Algorithm for Covid-19 Patient with Mild-Moderate Symptoms

Check Medications List

Table 1

Prescribe an Alternative COVID-19 Therapy
 For cases where drug-drug interaction management strategies are not possible or feasible, or the potential risks of such strategies outweigh the potential benefits.

• Amiodarone	• Flecainide	• Propafenone
• Apalutamide	• Glecaprevir/pibrentasvir	• Quinidine
• Bosentan	• Ivabradine	• Rifampin
• Carbamazepine	• Lumacaftor/ivacaftor	• Rifapentine
• Clopidogrel ^a	• Lumateperone	• Sildenafil for PH
• Clozapine	• Lurasidone	• St. John's wort
• Disopyramide	• Meperidine (pethidine)	• Tadalafil for PH
• Dofetilide	• Midazolam (oral)	• Tolvaptan
• Dronedarone	• Phenobarbital	• Vardenafil for PH
• Enzalutamide	• Phenytoin	• Voclosporin
• Eplerenone	• Pimozide	
• Ergot derivatives	• Primidone	

Do **not** give Paxlovid. Prescribe/refer for other treatments based on local availability in this order: 1) Remdesivir; 2) molnupiravir

Table 2

Temporarily Withhold Concomitant Medication, If Clinically Appropriate
 For guidance on restarting the concomitant medication, consult the [Liverpool COVID-19 Drug Interactions website](#).^b If withholding is not clinically appropriate, use an alternative concomitant medication or COVID-19 therapy.

• Alfuzosin	• Estazolam ^d	• Rosuvastatin
• Aliskiren	• Everolimus ^f	• Salmeterol
• Atorvastatin	• Finerenone	• Silodosin
• Avanafil	• Flibanserin	• Simvastatin
• Chemotherapy ^c	• Flurazepam ^d	• Sirolimus ^f
• Clonazepam ^d	• Lomitapide	• Suvorexant
• Clorzepate ^d	• Lovastatin	• Tacrolimus ^f
• Colchicine ^e	• Naloxegol	• Ticagrelor
• Diazepam ^d	• Ranolazine	• Triazolam ^d
• Eletriptan	• Rimegepant	• Ubrogapant
• Erythromycin	• Rivaroxaban ^g	• Vorapaxar

Ok to prescribe Paxlovid. Hold medications listed within Table 2 while on Paxlovid if clinically appropriate and consult [Liverpool COVID-19 Drug Interactions website](#) on when to re-start concomitant medication(s)

Table 3

Adjust Concomitant Medication Dose and Monitor for Adverse Effects
 Consult the [Liverpool COVID-19 Drug Interactions website](#)^b for guidance. If the dose of the concomitant medication cannot be adjusted, withhold the medication (if clinically appropriate) or use an alternative concomitant medication or COVID-19 therapy.

• Alprazolam ^d	• Digoxin	• Quetiapine
• Amlodipine	• Elexacaftor/tezacaftor/ivacaftor	• Rifabutin
• Apixaban	• Eluxadoline	• Riociguat
• Aripiprazole	• Fentanyl	• Saxagliptin
• Brexpiprazole	• Iloperidone	• Sildenafil for ED
• Buspirone	• Itraconazole	• Ruxolitinib
• Cariprazine	• Ivacaftor	• Tadalafil for ED
• Chlordiazepoxide ^d	• Ketoconazole	• Tamsulosin
• Cilostazol	• Maraviroc	• Tezacaftor/ivacaftor
• Clarithromycin	• Mexiletine	• Trazodone
• Clobazam ^d	• Oxycodone	• Vardenafil for ED
• Cyclosporine ^f	• Pimavanserin	
• Darifenacin		

Ok to prescribe Paxlovid but should consider adjusting dose of medications listed within Table 3 while patient is on Paxlovid using [Liverpool COVID-19 Drug Interactions website](#)

Therapeutic Algorithm for Covid-19 Patient with Mild-Moderate Symptoms

Table 2a. Therapeutic Management of Nonhospitalized Adults With COVID-19

Last Updated: December 28, 2022

Patient Disposition	Panel's Recommendations
All Patients	<ul style="list-style-type: none"> All patients should be offered symptom management (AIII). The Panel recommends against the use of dexamethasone^a or other systemic corticosteroids in the absence of another indication (AIIb).
Patients Who Are at High Risk of Progressing to Severe COVID-19 ^b	<p><i>Preferred therapies. Listed in order of preference:</i></p> <ul style="list-style-type: none"> Ritonavir-boosted nirmatrelvir (Paxlovid)^{c,d} (AIIa) Remdesivir^{d,e} (BIIa) <p><i>Alternative therapy. For use when the preferred therapies are not available, feasible to use, or clinically appropriate:</i></p> <ul style="list-style-type: none"> Molnupiravir^{d,f,g} (CIIa)
<p>Each recommendation in the Guidelines receives 2 ratings that reflect the strength of the recommendation and the quality of the evidence that supports it. See Guidelines Development for more information.</p>
