

LEGEND

SPECIAL FLOOD HAZARD AREAS INUNDATED BY 100-YEAR FLOOD

- ZONE A** No base flood elevations determined. Base flood elevations determined.
- ZONE AE** Flood depths of 1 to 3 feet (usually areas of ponding); base flood elevations determined.
- ZONE AH** Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- ZONE AO** Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- ZONE A99** To be protected from 100-year flood by Federal flood protection system under construction; no base flood elevations determined.
- ZONE AR** Area of special flood hazard which results from the deactivation of a previously accredited flood protection system which is determined to be in the process of being restored to provide a 100-year or greater level of flood protection.
- ZONE V** Coastal flood with velocity hazard (wave action); no base flood elevations determined.
- ZONE VE** Coastal flood with velocity hazard (wave action); base flood elevations determined.

FLOODWAY AREAS IN ZONE AE

- OTHER FLOOD AREAS**
- ZONE X** Areas of 500-year flood; areas of 100-year flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 100-year flood.
- OTHER AREAS**
- ZONE D** Areas in which flood hazards are undetermined.
- UNDEVELOPED COASTAL BARRIERS***
- Identified 1983
- Identified 1990
- Otherwise Protected Areas

* Coastal barrier areas are normally located within or adjacent to special flood hazard areas.

NOTES

This map is for use in considering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size, or all planning features outside Special Flood Hazard Areas. The community map repository should be consulted for more detailed data on BFES, and for any information on floodway delineations, prior to use of this map for property purchase or construction purposes.

Areas of Special Flood Hazard (100-year flood) include Zones A, AE, A1-A30, AH, AO, A99, AR, V, VE and V1-V30.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures.

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the Federal Emergency Management Agency.

Floodway widths in some areas may be too narrow to show to scale. Refer to Floodway Data Table where floodway width is shown at 1/20 inch.

Coastal base flood elevations apply only landward of 0.0 NGVD, and include the effects of wave action; these elevations may also differ significantly from those developed by the National Weather Service for hurricane evacuation planning.

Corporate limits shown are current as of the date of this map. The user should contact appropriate community officials to determine if corporate limits have changed subsequent to the issuance of this map.

For adjoining panels, see separately printed Map Index.

MAP REPOSITORY
 Sutter County Department of Public Works Planning Department, Suite D
 1150 Civic Center Boulevard, Yuba City, California 95992 (Maps available for reference only, not for distribution.)

Federal Emergency Management Agency

NOTE:
 This area is subject to flooding as a result of a discredited flood control system, (Zone AR) and flooding from an underlying or residual flooding source (e.g., Zone A, AE, A1-A30, AH, or AO) that will remain on the FIRM once the flood control system is restored. If available, base (100-year) flood elevations are provided for each zone designation, either as a constant elevation or depth shown in parentheses below the zone designation, or at various locations within the floodplain (shown as wavy lines). The Flood Insurance Study report should be consulted if further explanation regarding the flooding in these areas is required.

This area protected from the one percent annual chance (100-year) flood by levee, dike, or other structures subject to possible failure or overtopping during larger floods.

This area protected from the one percent annual chance (100-year) flood by levee, dike, or other structures subject to possible failure or overtopping during larger floods.

This area protected from the one percent annual chance (100-year) flood by levee, dike, or other structures subject to possible failure or overtopping during larger floods.
